

VinPerfect Light Liner Wine's First Perfect Closure

The VinPerfect closure system is the most consistent, reliable closure option on the market, using the industry standard 30 x 60 screwcap with a liner that was *actually* designed for wine.

The **Light** liner is designed for wines with the intention of being more approachable while still young. The Light provides similar oxygen ingress with much more consistency than the current Saranex-lined screwcap. With adequate control of oxygen pick-up at bottling, you should feel comfortable reducing Free SO₂ amounts at bottling, while still having more than adequate shelf-life.

Applications:

- Wine bottle closure

Oxygen-Regulating Liner - Light

(Multiple Patents Pending)

- **Oxygen Transfer Rate* of 0.08 mg O₂ / year..**
- 1 Pharmaceutical grade high-density elastomer ensures consistent sealing performance and resists compression set
- 2 Upper polyester (PET) layer performs initial oxygen regulation
- 3 Vapor-deposited aluminum coating fine-tunes oxygen transmission
- 4 Lower polyester (PET) layer encapsulates the aluminum and provides an inert, food-grade contact surface

Features / Benefits:

- Standard 30 mm x 60 mm ROPP form factor
- Laser engraving of the cap-top allows for sharp and highly detailed graphics with no minimum order
- Custom colors, embossing, top and side printing available.
- Delivers the finest flavors and aromas, while protecting your wine against oxidation and reduction. It is TCA-free, easy to open and guarantees no leakage, assuming no defects in glass.

Environmental Benefits:

- 100% Recyclable
- Liner has no chlorine, no Dioxin released into environment
- No Tin was mined in the formation of cap or liner

* Average value based on NOMASense and Mocon oxygen values through proprietary internal testing methodologies. Currently in final testing stages.

All VinPerfect Closures are 100% recyclable aluminum and the inserted liners are 100% recyclable with other LDPE food packaging materials.
